(PRAE-) PRAECIS PHARM INC.

```
The invention relates to an antiinflammatory compound (especially AMM48628-AMM48627) comprising a membrane translocation domain (AAM48628-AMM48627) comprising a membrane translocation domain canno acid residues, fused to a NEMO binding sequence (AAM48625-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds are as selective inhibitors of cytokine-mediated NFkappaB cortivation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, osteoarthritis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoprorais; and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

AMM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48627) or AAM486651 which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (Cytostatic, antiporiatic, antiinflammatory compounds have antiasthmatic, cytostatic, antiporessive, dermatological, neuroprotective, onotropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NRkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKkbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoporosis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, grannlomicosis, multiple sclerosis; transplant rejection; osteoporosis; grannlomicosis, multiple sclerosis; transplant rejection; osteoporosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermacological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

                                                                                                                                                                                                                                                                                                                                                                                                       The Invention Felaces to an antilintammatory compound tespecially
AMM48620-AMM48645). Comportsing a membrane translocation domain
(AAM48620-AMM48645). The AMM48646-AAM48651) which comprises from 6-15
anino acid residues, fused to a NEWO binding sequence
(AAM48625-AAM48619). The antiinflammatory compounds have antiasthmatic,
(VLOStatic, antiabooriatic, antiinflammatory compounds have antiasthmatic,
ontropic, antiatherosclerotic, virucide and antiallergic activity. The
compounds act as selective inhibitors of cytokine-mediated NFkappaB
activation by blocking interaction of IkappaB kinase beta (IKKbeta) at
the NEWO binding domain that results in inhibition of IKkbeta kinase
activation and subsequent decreased phosphorylation of IKkpeta kinase
activation and subsequent decreasis, rhemmatory disorders, e.g. asthma,
lung inflammatory bowel disease, sepsis, vasculitis,
osteoarthritis, inflammatory bowel disease, sepsis, vasculitis,
osteoathritis, inflammatory bowel disease, sepsis, vasculitis,
drandlomatosis, multiple sclerosis, transplant rejection, osteoporosis,
drandlomatosis, multiple sclerosis, transplant rejection, and ataxia
telanglectasis. The compounds are also useful for treating
drandlomatosis, multiple sclerosis, urticaria, anaphylaxis,
drandlomatosis, multiple sclerosis, urticaria, anaphylaxis,
drandlomatosis, uniticaria, anaphylaxis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to an antiinflammatory compound (especially AM48628-AAM48645), comprising a membrane translocation domain (AAM48628-AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antisthmatic, cytostatic, antiporiatic, antirheumatic, antiarthiz, osteogathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NRAappaB compounds act as selective inhibitors of cytokine-mediated NRAappaB cortivation by blocking interaction of IkappaB kinase beta (IKKbeta kinase the NEWO binding domain that results in inhibition of IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, or bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection, osteoporosis, allocations, and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

AMM48620-AAM48645), comprising a membrane translocation domain.

(AAM48620-AAM48645), comprising a membrane translocation domain.

(AAM48620-AAM48619). The antiinflammatory comprises from 6-15
amino acid residues, fused to a NEWO binding sequence

(AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic,
cytostatic, antiposoriatic, antirheumatic, antiarthritic, osteopathic,
antibacterial, immunosuppressive, dermatological, neuroprotective,
compounds act as selective inhibitors of cytokine-mediated NFkappaB

compounds act as selective inhibitors of cytokine-mediated NFkappaB

compounds act as selective inhibitors of trappaB kinase beta (IKKbeta) at
the NEMO binding domain that results in inhibition of IKAppaB. The
compounds are useful for traction inhibition of IKAppaB. The
compounds are useful for tracting inflammatory disorders, e.g. asthma,
lum inflammation or cancer, psoriasis, rheumatodid arthritis,
osteoarthritis, inflammatory bowel disease, sepsis, vasculitis,
dursitis, autoimmune diseases such as lupus, polymyalgia, sclercoderma,
granulomatosis, multiple sclerosis, transplant rejection; osteoporosis,

Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis

Claim 6; Page 62; 88pp; English.

The invention relates to an antilninammatory compound (especially AMM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48646), comprising a membrane translocation domain (AAM48620-AAM48646). The AMM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM486525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiatherselectric, antiatherselectric, virtuide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkapab activation by blocking interaction of Ikapab kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IKApapa The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, viral infections; and ataxia telangisctasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, child and screen, dermatitis, unburn, aging and invention relates to an antiinflammatory compound (especially arthritis.

(AAM48620-AAM48645), comprising a membrane transflocation domain

(AAM48820-AMM48627) or AAM48646-AAM48651) which comprises from 6-15

amino acid residues, fused to a NEWO binding sequence

(AAM48825-AAM48619). The antiinflammatory compounds have antiasthmatic,

cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic,

antibacterial, immunosuppressive, dermatological, neuroprotective,

nootropic, antiatheroscleroic, virucide and antiallergic activity. The

compounds act as selective inhibitors of cytokine-mediated NFkappaB

activation by blocking interaction of ItspapaB kinase beta (IKKObeta) at

the NEWO binding domain that results in inhibition of IKKObeta kinase

activation and subsequent decreased phosphorylation of IkkappaB. The
                                                                                                                                                                                                                                                                                                                                                       Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursatis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections, and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

antibacterial, immunosuppressive, dermatological, neuroprotective, noctropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NRkapaB cetivation by blocking interaction of IkapaB kinase beta (IKKDeta) at the NEWO binding domain that results in inhibition of IKKDeta kinase activation and subsequent decreased phosphorylation of IKKapaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, costeoarthritis, inflammatory bowel disease, sepsis, vasculitis, costeoarthritis, intible sclerosis, transplant rejection; osteoporosis, caranulomatosis, multiple sclerosis, transplant rejection; osteoporosis, clangiener's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, unticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

(AAAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipacatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, antiatherosaclerotic, antiatherosaclerotic, virucide and antiallergic activity.

Compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IxappaB kinase beta (IXAbeta kinase activation by blocking interaction of IxappaB kinase beta (IXAbeta kinase activation and subsequent decreased phosphorylation of IXAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, or seconthitis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; irransplant rejection; osteoporosis; Alzheimer's disease; atheroscalerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, pro-inflammatory responses such as allergies; urticaria, anaphylaxis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermacological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczeme; cytokine; NPkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                               4-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .4-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-SEP-2000
             The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain acid residues, fused to a NEMO binding sequence (AAM48625-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiinflammatic, antiathritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NEKapaB activation by blocking interaction of IkapaB kinase beta (IKKDeta kinase activation by blocking interaction of IkapaB kinase beta (IKKDeta kinase activation and subsequent decreased phosphorylation of IkApaB . The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoporosis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis, Alzheimer's diseases intherosclerosis, viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, arthritis, arthritis, surburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliorate a medical condition in e.g. humans, mice, cabbits, goates, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. The antibodies to the antigens can also diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (BLISA). Disorders which are diagnosed or treated immunosorbent assays (BLISA). Disorders which are diagnosed or treated immunosorbent assays (BLISA). Disorders which are diagnosed or treated immunosorbent assays (BLISA). Disorders which are diagnosed or treated cardiovascular disorders e.g. cardioarast, cerebrovascular disorders e.g. cardioarast, cerebrovascular disorders e.g. cardioarast, nervous system disorders e.g. cardioarast, infections caused by bacteria, viruses and fungicand ocular disorders e.g. corneal infection. The polypeptides and sloop be used to aid wound healing and epithelial cell proliferation, to transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present polypeptide represents a partial sequence of a novel BGIII-like callulase of Gliocladium roseum. It was deduced from a partial gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) of Trichoderma resets EGIII callulase and related enzymes. PCR has been used to identify novel EGIII-like enzymes, including the present polypeptide, from bacterial and fungal sources (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                     capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, coffactors and other nutritional components. Numerous examples of diseases and disorders treated by the nucleic acids and proteins are given in the specification. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (see AAY06325-29)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence shows homology to T. reesei EGIII (see AAY06330). Also provided by the invention are vectors, host cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of wood pulp, in the reduction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).
            cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of wood pulp, in the reduction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present polypeptide represents a full-length sequence of a novel BGIII-like cellulase of Gliochadium roseum. It was deduced from a gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) of Trichodearma reseat BGIII-cliulase and related enzymes. PCR has been used to identify novel BGIII-like enzymes, including the present protein, from bacterial and fungal sources (see AAY06331-70)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cellulase; endoglucanase; EGIII; textile; feed additive; baking; food processing; grain wet milling; pulp; paper.

Sequence 22368, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICATION NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT PAPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 22368 APPLICANT: Tukuo. Fukuda

APPLICANT: Tukuo. Fukuda

APPLICANT: Tukuo. Fukuda

APPLICANT: Moser, Betchina

APPLICANT: Moser, Betchina

APPLICANT: Medeen, Albert H.

APPLICANT: Undeen, Albert H.

TITLE OF INVENTION: Compositions, and Methods for Control of Invertebrates

TITLE OF INVENTION: Compositions, and Methods for Control of Invertebrates

TITLE OF INVENTION: Us/09/345,236B

CURRENT APPLICATION NUMBER: US/09/345,236B

CURRENT PILING DATE: 1999-06-30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 29, Application US/08850917

Patent No. 5854045

Patent No. 5854045

GERREAL INFORMATION:

APPLICANT: Hanafusa, Hidesaburo

TITLE OF INVENTION: A TRANSMENBRANE TYROSINE PHOSPHATASE

TITLE OF INVENTION: AND METHODS OF USE THEREOF

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:

ADDRESSEE: Klauber & Jackson

STREET: All Hackensack Avenue

CITY: Hackensack Avenue

STATE: New Jersey

COUNTRY: USA

ZIPE: O'601

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                           The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB08725-ABB08725) and some comprises contacting a cell with an anti-inflammatory compound (ABB08725-ABB08725) comprising at least one NRMO binding domain (ABB77313). The compound has acts through selective inhibition of cytokine-mediated NF-kB activation by blocking the interaction of NEMO with IXXDeta at the NRMO binding domain. Blockage of IXXDeta-NEMO interaction results in inhibition of IXADPAB. The compound may also act (directly) or indirectly) by blocking the recruitment of leukocytes into sites of acute and chronic inflammation. The compound may also act (directly or indirectly) by blocking the recruitment of leukocytes into sites of acute and chronic inflammation, by down-regulating the expression of E-selectin on neukocytes or by blocking osteoclast (differentiation. The compound is useful in treating osteoclast conditions, where the condition is an inflammatory disorder, an autoimmune disease, transplant rejection, osteoporosis, cancer, Alzheimer's disease, atherosclerosis, a viral infection or ataxia telangiectasia. The inflammatory disorder is asthma, allergies, creaming anaphylaxis, cutaneous inflammation, seppsis, psoriasis, osteoarthritis, psoriatic arthritis, lugus and bursitis. The inflammatory disorder may also be dermatitis, eczema, psoniasis, osteoarthritis, psoriatic arthritis, lugus and cursed by Epstein-barr, cytomegalovirus or herpes simplex, other viral infections crawsed by Epstein-barr, cytomegalovirus or herpes simplex, other viral constending anaphylaxis, drug and food sensitivity, contact dermatitis, and any application in which cormound may be used to replace corticosteroids in any application in which corticosteroids are used, including marrial and incompound may be used to replace corticosteroids in minimatory discreaming anaphylaxis and some and conservations of immunosuppression in university and decompound may as a second of immunosuppres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

```
The invention relates to an antiinflammatory compound (especially AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-or AAM48645) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, artipacterial, immunosuppressive, dermatological, neuroprotective, antibacterial, immunosuppressive, dermatological, neuroprotective, antiatherosolerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKDeta) at the NEWO binding domain that results in inhibition of IKADpaB. The activation and subsequent decreased phosphorylation of IKADpaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoporosis, multiple solerosis, transplant rejection, osteoporosis, plubing and president rejection, and stavia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pro-inflammatory responses such as allergies, urticaria, anaphylaxis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alzheimer's disease, atherosclerosis, viral infections, and ataxia telangiectasia. The compounds are also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

```
The invention relates to an antiinflammatory compound (especially AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall shall
                                                                                                                                                                                                                                                                  Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dertantological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; heumatold arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alzheimer's disease, atherosclerosis, viral infections, and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ataxia telangiectasia; allergy; anaphylaxis; arthritis.

AMM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48645), comprising a membrane translocation domain acid residues, fused to a NEWO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, ortostatic, antiathrematic, antiathremator, compounds have antiasthmatic, antiathremscleroric, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NEKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreaced phosphorylation of IKAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzehimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating end cancer, provinflammatory responses such as allergies, urticaria, anaphylaxis, carbeits, arthritis, infections; and ataxia telangiectasia. The compounds are also useful for treating and criminatory responses such as allergies, urticaria, anaphylaxis, arthritis, infection, dermatitis, sumburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antiinflammatory compound (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 6; Page 62; 88pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to antiinflammatory compounds comprising NEMO binding domain (NBD) peptides. The NEMO binding domains are found on Ikapaba kinase-beta (IKKDeta) and Ikapaba kinase-alpha (IKKalpha) proteins. The antiinflammatory compounds of the invention are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKs such as IKKalpha or IKKbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating
                                                                                                                                                                                                                                                                                                                                                          Human; antiinflammatory compound; NEMO binding domain; NBD; IKKbeta; IkappaB kinaee-abeta; IkappaB kinaee-alpha; IKKalpha; NF-kappaB; nuclear factor-kappaB induction; inflammatory disorder; autoimmune disease; osteoporosis; cancer; Alzheimer's disease; atheroselerosis; viral infection; Ataxia telangiscteasis; transplantation detection; immunosuppressie; osteopathic; cytostatic; nootropic; neuroprotective; antiatheroselerotic; virucide;

The invention relates to an antiinflammatory compound (especially AMM48628-AMM48645), comprising a membrane translocation domain (AMM48628-AMM48645), comprising a membrane translocation domain (AMM48628-AMM48619). The antiinflammatory compounds have antisthmatic, cytostatic, antipostriatic, antiheratic, dermatological, neuroprotective, cytostatic, antipostriatic, antiheratic, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking intracaction of IkappaB kinase beta (IKkbeta) at the NEWO binding domain that results in inhibition of IKkbeta kinase activation and subsequent decreased phosphorylation of IKkbeta kinase activation and subsequent decreased phosphorylation of IkkpeB The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoparthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, presimitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, prelimer's disease, atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease, atherosclerosis; varallifections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis,

                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an antiinflammatory compound (especially AM48628-AM48645), comprising a membrane translocation domain (AAM48628-AM48645) comprising a membrane translocation domain (AAM48620-AM48645) or AAM48651) which comprises from 6-15 compounds acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, cytostatic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated Nkappas compounds act as selective inhibitors of cytokine-mediated Nkappas the NEMO binding domain that results in inhibition of IKKbeta kinase citivation and subsequent decreased phosphorytation of IKAppas. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antificumatic, antiarthitic, osteopathic; antibacerial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antialegic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKOeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimnune disorder; multiple sclerosas; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AMM4861) which comprises from 6-15 amino acid residues, fueed to ARM480 binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antibacteric, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The
                           bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosels; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriacis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vascultis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
                                                                                                                                                                   Alzheimer's disease, atherosclerosis, viral infections, and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAM48555
     g
```

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain

```
'C' optostatic, antipsoriatic, antitathritic, osteopathic, antipsoriatic, antitathritic, osteopathic, antipsoriatic, antitathresolerotic, antitathresolerotic, variode and antiallerotic activity. The noctropic, antiatherosolerotic, variode and antiallerotic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NRMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoparathritis, inflammatory bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, pursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, canulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's diseases, atherososlerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirhumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
(AAM48620-AMM48627 or AAM40010 AND binding sequence amino acid residues, fused to a NEWO binding sequence (AAM48525-AAM40619). The antiinflammatory compounds have antiasthmatic, (AAM48525-AAM40619) antiinflammatic, antiarthritic, osteopathic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠ
                                                                                                              anthon acid residues, fused to a NEMO binding sequence
(AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic,
cytostatic, antipsoritatic, antirheumatic, antiarthritic, osteopathic,
cytostatic, antipsoritatic, antirheumatic, antiarthritic, osteopathic,
antibacterial, immunosuppressive, dermatological, neuroprotective,
compounds act as selective inhibitors of cytokine-mediated NFkappaB
activation by blocking interaction of IkappaB kinase beta (IKKbeta) at
the NEMO binding domain that results in inhibition of IKKpeta kinase
activation and subsequent decreased phosphorylation of IKKpeta B The
compounds are useful for treating inflammatory disorders, e.g. asthma,
lung inflammation or cancer, bowel disease, sepsis, vasculitis,
osteoparthritis, inflammacory bowel disease, sepsis, vasculitis,
bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma,
granulomatosis, multiple sclerosis; transplant rejection; osteoporosis,
colangicctasis, and tiple sclerosis; viral infections; and ataxia
telangicctasia. The compounds are also useful for treating
pro-inflammatory responses such as allergies, unburn, aging and
contractive; and contractive and anticomer contractive and anaphylaxis,
contractive and anticomer and an anaphylaxis,
contracting and anticomer and an anaphylaxis,
contracting and anticomer and an anaphylaxis,
contracting and anticomer and an allergies, unticaria, anaphylaxis,
contractive and an anticomer and anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis,
contractive and an anticomer and an anaphylaxis, and anaphylaxis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; autoimmune discretifis; inflammatory bowel disease; autoimmune discretifis; inflammatory bowel disease; substitute sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                                                                     AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48627 or AAM48646-AAM48651) which comprises from 6-15
                                                                      invention relates to an antiinflammatory compound (especially

The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620). CAM48665-AAM48651) which comprises from 6-15 (AAM48620-AAM48620). The AAM48651 which comprises from 6-15 (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappas compounds act as selective inhibitors of cytokine-mediated NFkappas activation by blocking interaction of Ikappas kinase beta (IKKObeta kinase activation and subsequent decreased phosphorylation of Ikappas. The compounds are useful for treating inflammatory disorders, e.g. asthma, ung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, and ataxia telangist and sisease; attaing inflammatory inflammatory inflammatory and ataxia and analysis, and ataxia telangist and alsease; attaingist are also useful for treating and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; anticheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowal disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pro-inflammatory responses such as allergies, urticaria, anaphylaxis,

                                                                                                                                                                                                                                                                                                                                                                                                                             AAM48628-AAM48645), comprising a membrane translocation domain

(AAM48620-AAM48645), comprising a membrane translocation domain

(AAM48620-AAM48619). The antiinflammatory comprises from 6-15

amino acid residues, fused to a NEWO binding sequence

(AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic,

cytostatic, antipsoriatic, antirheumatic, antiarrbritic, osteopathic,

antibacterial, immunosuppressive, dermatological, neuroprotective,

nootropic, antiatherosclerotic, virucide and antiallergic activity. The

compounds act as selective inhibitors of cytokine-mediated NFkappaB

cotivation by blocking interaction of IkappaB kinase beta (IKKota Minase

ctivation and subsequent decreased phosphorylation of IkappaB. The

activation and subsequent decreased phosphorylation of IkappaB. The

compounds are useful for treating inflammatory disorders, e.g. asthma,

lung inflammation or cancer, psorlasis, rheumatoid arthritis,

osteoarthritis, inflammatory bowel disease, sepsis, vasculitis,

chursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma,

granulomatosis, multiple sclerosis; transplant rejection; osteoporosis;

Alzheimer's disease; atherosclerosis; viral infections; and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; deriarthological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620-AAM48645), which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarchritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antialherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of Cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammation of IkappaB. The activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammation of IkappaB. The activation or cancer, psoriasis, rheumatoid arthritis, unginamatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitisher, a disease, atheroselerosis, transplant rejection; osteoporosis; telangiectaia. The compounds are also useful for treating and ataxia and ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKOeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48629-AAM48645) comportising a membrane translocation domain and cold residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostacic, antipsoriatic, antirheumatic, antiarthitic, osteopathic, cytostacic, antipsoriatic, antirheumatic, antiarthitic, osteopathic, cytostacic, antipsoriatic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKota) at the NEWO binding domain that results in inhibition of IKKota kinase activation and subsequent decreased phosphorylation of IKKota kinase activation or cancer, pooriasis, rheumatoid arthritis, obsecutivitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, cannelemer's disease; atherosclerosis; viral infections; and ataxia telanglectasis. The compounds are also useful for treating and taxia arthritis arthritis; arthritis, anticatia, anaphylaxis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, anticatia, anaphylaxis, arthritis, and arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, arthritis, ar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain and a selectives fused to a NEMO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiporiatic, antihemmatory compounds have antiasthmatic, antiboterial, antihemosuppressive, virucide and antiallergic activity. The contropic, antiatherosclerotic, virucide and antiallergic activity. The contropic, antiatherosclerotic, virucide and antiallergic activity. The contropic, antiatherosclerotic, virucide and antiallergic activity. The contropic, antiatherosclerotic, virucide and antiallergic activity. The contropic antiatherosclerotic, virucide and antiallergic activity. The compounds are useful for treating inflammation of IxkOpea kinase activation and subsequent decreased phosphorylation of IxkOpea kinase activation and subsequent decreased phosphorylation of Ixeopas. The compounds are useful for treating inflammation of arthritis, unginal antial activities, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, and ataxia transplaner's disease; atherosclerosis; viral infections; and ataxia telegation controller and also are also useful for treating controllers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          May MJ,
  The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB077313). The comprising at least one NEWO binding domain (ABB077313). The compound has acts through selective inhibition of KAB077313). The compound has acts through selective inhibition of Cytokine-mediated NF-kB activation by blocking the interaction of NEWO control of IkappaB. The compound may also interaction results in inhibition of IkappaB. The compound may also control of acts of acute and chronic inflammation, by down-regulating the expression of B-selectin on leukocytes or by blocking osteoclast differentiation. The compound is useful in treating NF-kB mediated conditions, where the condition is an inflammatory disorder, an autoimmune disease, transplant rejection, osteoporosis, cancer, alternated arthritis, osteoarthritis, osteoporosis, psoriasis, cutaincaria, anaphylaxis, cutaneous inflammation, sepsis, psoriasis, cuticaria, anaphylaxis, cutaneous inflammation, sepsis, psoriasis, crematicis, rhe inflammatory disease, vasculitis, inflammatory disease, vasculitis, cecema, psoriasis, osteoarthritis, osteoarthritis, psoriatic arthritis, ingus and chursitis, net inflammatory disease, ulcerative colitis, copolymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, polymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, cryoglobulinaemia or multiple sclerosis. Por chronic viral infections cryoglobulinaemia or multiple sclerosis. Por chronic viral infections cryoglobulinaemia or multiple sclerosis. Por chronic viral infections cryoglobulinaemia or multiple sclerosis. Rocker or colitis, cutact dermatis, multiple sclerosis. Rocker or criticosteroids in diseases include HIV and influenza. The compound may also be useful for treating anaphylaxis, drug and food sensitivity, contact dermatisis, multiple collections created by particular or miliah contact dermaticies in multiple collections researched and sense or criticosteroids in minich contact de
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antiinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEMO binding domain of IKKOeta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppression in transplants and cancer therapy. Also for identifying

The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipporiatic, antiinflammatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosolerotic, virucide and antiallargic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkAppaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IkKbeta kinase activation and subsequent decreased phosphorylation of IkAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatcry bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia relangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48621) without comprises from 6-15 (AAM48620-AAM48621). The AAM48651 which comprises from 6-15 (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antisheuratic, antiasthatic, osteopathic, cytostatic, antipsoriatic, antisheuratic, antiasthatic, osteopathic, contoured, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds are as ealective inhibitors of cytokine-mediated NFkappaB cetivation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IKKappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, poorlasis, rheumatoid arthritis, osteoporosis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis, labeniar's diseases atherosclerosis, viral infections, osteoporosis, arthritis, conflammatory responses such as lupus, polymyalgia, scleroderma, clansfermer's diseases atherosclerosis, viral infections, osteoporosis, arthritis, anticlammatory responses such as allergies, urticaria, anaphylaxis, arthritis, arthritis, anticlammatory responses such as allergies, urticaria, anaphylaxis, arthritis, arthritis, anticlammatory responses such as allergies, urticaria, anaphylaxis, arthritis, arthritis, anticlammatory decrease, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                     Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; anticheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; destactological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKWbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Phillips K;
                                                                                                                                                                                                     Anti-inflammatory peptide SEQ ID NO 39.

The Translation Feater Comprising a membrane translocation domain (APM48628-AAM48645), comprising a membrane translocation domain (APM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48619). The antinflammatory compounds have antisethmatic, ortostatic, antishermatic, immunosuppressive, dermatological, neuroprotective, nootropic, antishersoslerotic, virucide and antishlargic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEW binding domain that results in inhibition of IKAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoperosis, transplant rejection; osteoporosis; bursitis; autoimmune diseases such as lugue, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzahaner's disease; atheroscalerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, arbitic; arbitichy, eczema, dermatitis, sunburn, aging and

The present invention relates to antiinflammatory compounds comprising NEMO binding domain (NBD) peptides. The NEMO binding domains are found on IkappaB kinase-beta (IKKbeta) and IkappaB kinase-alpha found on IkappaB kinase-beta (IKKbeta) and IkappaB kinase-alpha are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKs such as IKKabipha or IKKbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane inflammatory compound further comprises at least one membrane inflammatory disorders, autoimmune diseases, osteoporosis, cancer, alzheimer's disorders, autoimmune diseases, osteoporosis, cancer, alzheimer's disorders, autoimmune diseases, osteoporosis, cancer, telangiecteasia, and for transplantation detection. The compounds of the invention block NF-kappaB induction by IKK but do not inhibit the basal activity of NF-kappaB. ABU08418-ABU08432 represent human
                                                                                                                                                                                                                                                                                                                                                                                                 IkappaB kinase-beta; IkappaB kinase-alpha; IKKalpha; NF-kappaB; muclear factor-kappaB induction; inflammatory disorder; autoimmune disease; osteoporosis; cancer; Alzheimer's disease; atherosclerosis; viral infection; Ataxia telangiectasia; transplantation detection; immunosuppressive, osteopathic; cytostatic; nootropic; neuroprotective; antiatherosclerotic; virucide; vasotropic; antirheumatic; antiatherosclerotic; virucide;

The invention relates to an antiinflammatory compound (especially AM48628-AM48645), comprising a membrane translocation domain (AM48620-AM48645), comprising a membrane translocation domain acid residues, tused to a NEWO binding sequence (AAM48625-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipostatic, antirheumatic, antiarthritc, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, oncropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine mediated NFkappaB activation by blocking interaction of IxappaB kinase beta (IXAppaB activation and subsequent decreased phosphorylation of IXAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, ung inflammation or cancer, psoriasis, rheumatoid arthritis, actorderma, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atheroscolerosis; viral infections; and ataxia telangiactasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis,

The antiinflammatory compounds have antiathmatic, cytosteatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta kinase the NEW binding domain that results in inhibition of IKKpeta kinase activation and subsequent decreased phosphorylation of IKAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema;
osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, burstiis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAM48628-AAM48645), comprising a membrane translocation dômain (AAM48620-AMM4861) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antibacterial, immunosuppressive, dermatological, neuroprotective, notroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEWO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, pranulomatosis, multiple sclerosis; transplant rejection; osteoporosis, Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, utricaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

Phillips K;

Findeis MA,

May MJ, Ghosh S,

WPI; 2002-121889/16.

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain

Claim 6; Page 62; 88pp; English.

```
Amino acid residues, fused to a NEMO binding sequence
(AAM486125-AAM48619). The antiinflammatory compounds have antiasthmatic,
cytostatic, antipsoriatic, antirheumatory compounds have antiasthmatic,
antibacterial, immunosuppressive, dermatological, neuroprotective,
compounds act as selective inhibitors of cytokine-mediated NFkappaB
compounds act as selective inhibitors of cytokine-mediated NFkappaB
compounds act as selective inhibitors of stokine-mediated NFkappaB
cotivation by blocking interaction of IkappaB kinase beta (IKKbeta kinase
compounds are useful for treating inflammatory disorders, e.g. asthma,
lung inflammation or cancer, psoriasis, rheumatoid arthritis,
compounds are useful for treating inflammatory disorders, e.g. asthma,
lung inflammation or cancer, psoriasis, rheumatoid arthritis,
costeoarthritis, inflammatory bowel disease, sepsis, vasculitis,
burstiis, autoimmune diseases such as lupus, polymyalgia, scleroderma,
granulomatosis, multiple sclerosis, transplant rejection; osteoporosis,
Alzheimer's disease; atherosclerosis, viral infections; and ataxia
telangiectasia. The compounds are also useful for treating
pro-inflammatory responses such as allergies, urticaria, anaphylaxis,
archivettics, and the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of the secondary of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKOeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease, atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ************************
                                                                           The Invention relates to an autulation comprises to membrane translocation domain.

AMM48628-AAM48645), comprising a membrane translocation domain.

CAMM48620-AMM48627 or AAM48646-AAM48651) which comprises from 6-15
amino acid residues, fused to a NEMO binding sequence

(AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic,

cytostatic, antiathematic, antiathematic, antiathritic, osteopathic,

antibacterial, immunosuppressive, dermatological, neuroprotective,

compounds act as selective inhibitors of cytokine-mediated NFkappaB

compounds act as selective inhibitors of cytokine-mediated NFkappaB

compounds are useful for treating inflammatory disorders, e.g. asthma,

compounds are useful for treating inflammatory disorders, e.g. asthma,

compounds are useful for treating inflammatory disorders, e.g. asthma,

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620). The AAM48645-1 which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence anio acid residues, fused to a NEMO binding sequence antibaterial, immunosuppressive, dermatological, neuroprotective, corpounds act as selective inhibitors of cytokine-mediated NEKappaB activation by blocking interaction of ItappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbpta kinase activation and subsequent decreased phosphorylation of IKKbpta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psortasis, rheumatoid arthitis, compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psortasis, rheumatoid arthitis, costeoarthitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; viral infections; and ataxia allosisctasia. The compounds are also useful for treating pro-inflammatory responses such as allorgies, urticaria, anaphylaxis, arthitis, anaphylaxis, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosolerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NekappaB; lkappaB kinase beta; IKKDeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
                                                                            Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                              AMM48620-AMM48645), comprising a membrane translocation domain.

(AAM48620-AMM48645), comprising a membrane translocation domain.

(AAM48620-AMM48645), romprising a membrane translocation domain.

(AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiabectaria, antiinflammatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, ontopic, antiathersolatoric, virucide and antiallargic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IKKpeta kinase activation and subsequent decreased phosphorylation of IKKpeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, costeoarthritis, inflammatory bowel disease, sepsis, vasculitis, costeoarthritis, inflammatory bowel disease, sepsis, vasculitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                      domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                    Novel antiinflammatory compound comprising membrane translocation
                                                                                                                                                                                                                                                                                                    invention relates to an antiinflammatory compound (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

CAMM48525-AAM48619). The antinflammatory compounds have antiasthmatic, cytostatic, antiporalatic, antinheumatic, antiarheumatic, conformation antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB cutivation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEWO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, cy granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

AMM48620-AMM48645), comprising a membrane translocation domain AMM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain ammediate a missing sequence from 6-15 amino acid residues, fuesd to a NEWO binding sequence (AAM4825-AAM48619). The antiinflammatory compounds have antisthmatic, osteopathic, antipaterial, immunosuppressive, dermatological, neuroprotective, nootropic, antistherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB contivation by blocking interaction of fkappaB kinase beta (IKKbeta) at the NEWO binding domain that results in inhibition of IKAppaB. The activation and subsequent decreased phosphorylation of IKAppaB. The compounds are useful for treating inflammatoin of IKAppaB. The compounds are useful for treating inflammatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, burstitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, continuations of disease, alberosclerosis, viral infections, and ataxia at the antipal are also useful for treating continuations of actoporosis; continuations of a sease, and ataxia and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and a sease and sease and sease and sease and sease and sease and sease and sease and sease and sease and sease and sease and s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

AMM 86620-AMM 8645), comprising a membrane translocation domain (AMM 8620-AMM 8645), comprising a membrane translocation domain (AMM 8620-AMM 8645), comprising a mino acid residues, fused to a NEWO binding sequence amino acid residues, fused to a NEWO binding sequence (AAMM 8620-AMM 8619). The antiinflammatory compounds have antiasthmatic, antipactatic, antipactatic, antipactatic, antipactatic, antiablersocleroric, virucide and antiallergic activity. The compounds act as selective inhibitors of Cycokine-mediated NEKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lum inflammation of ikappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lum inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatomis, multiple sclerosis; transplant rejection; osteoporosis; clanagiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticating, and ataxia pro-inflammatory responses such as allergies, urticating and ataxia, and controlled activity, eczema, dermatitis, annburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Submitted (AUG-1995) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: SEQUENCE-SPECIFIC TRANSCRIPTION FACTOR WHICH IS PART OF
A DEVELOPMENTAL REGULATORY SYSTEM THAT PROVIDES CELLS WITH
SPECIFIC POSITIONAL IDENTITIES ON THE ANTERIOR-POSTERIOR AXIS.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE ANTP HOMEOBOX FAMILY.

"Organization of human class I homeobox genes.";
Genome 31:745-756(1989).
-!- FUNCTION: SEQUENCE-SPECIFIC TRANSCRIPTION PACTOR WHICH IS PART OF
A DEVELOPMENTAL REGULATORY SYSTEM THAT PROVIDES CELLS WITH
SPECIFIC POSITIONAL IDENTITIES ON THE ANTERIOR-POSITERIOR AXIS.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE ANTP HOMEOBOX FAMILY.
                                                                                                                                                                                                                                                                                                       SECUENCE FROM N.A.
